Speaking of NEWS, here's some from WattStopper!

Based on simplicity, flexibility, and scalability, WattStopper's Digital Lighting Management (DLM) platform continues to revolutionize lighting controls projects. Announcing the availability of new DLM fixture-integrated controls - products that add granularity to our proven suite of room and area controls.

Working as part of the familiar DLM local network, three new products provide complete flexibility to reconfigure the controls without any rewiring should the needs or layout of a space change.

Now you can combine individual fixture controls, mounted in fixtures from any manufacturer, with industry-leading panels, room controllers, sensors, and more. It is the ideal hybrid system.
